Summary

Python enthusiast with experience in backend development and machine learning. Skilled in Django, Flask, REST APIs, Scikit-learn, and PyTorch, with hands-on projects in fraud detection and churn prediction. Experienced in Docker deployments and CI/CD workflows, focused on building scalable, data-driven applications.

Work Experience

COLAB Research Lab, FAST NUCES

Technical Workshops & Presentations

2025

- Conducted workshops on Python programming, backend development, and machine learning fundamentals.
- Delivered a DevOps workshop covering CI/CD, automation tools, containerization, and real-world deployment practices.

Projects

Fraud Detection System (ML): Developed a Scikit-learn classification model for detecting fraudulent transactions with data preprocessing, feature engineering, and evaluation using accuracy and precision. 2026

Customer Churn Prediction System (Machine Learning) : Developed a predictive model to identify customer churn using supervised learning algorithms. Applied feature selection, data cleaning, and model optimization to improve prediction performance. 2026

Automated CS Master's Program Scraper and Analysis : Developed a Python-based data pipeline to scrape and analyze university program data. Implemented data cleaning, preprocessing using Pandas and NumPy, and performed analytical insights on tuition trends. 2025

Containerized Django Web Application – Calculator : Built a Django-based web application and deployed it using Docker and Docker Compose. Implemented backend logic, handled HTTP requests, and simulated real-world deployment practices. 2025

CI/CD Pipeline Automation with Jenkins and Python : Designed an automated CI pipeline integrating GitHub, Jenkins, and Pytest to validate code on each commit, ensuring reliability and continuous integration practices. 2025

Skills

Programming & Scripting: Python, C, C++, Shell Scripting, Bash

Machine Learning & AI: Supervised Unsupervised Learning, Scikit-learn, PyTorch, NumPy, Pandas, Matplotlib

Web & API Development: Django, Flask, REST APIs, HTML, CSS, JavaScript

DevOps & Automation: Jenkins, GitHub Actions, GitLab CI/CD, CI/CD Pipelines, Automation Scripting

Containers & Orchestration: Docker, Docker Compose, Kubernetes (Minikube, Helm, CRDs)

Cloud & Infrastructure: Oracle Cloud (OCI), Linux Server Admin, SSH, Cloud Security

Version Control & Collaboration: Git, GitHub

Monitoring & Configuration: Puppet, Monit, Prometheus, System Monitoring

Databases & Testing: PostgreSQL, MySQL, MongoDB, Pytest, PyUnit, Unit Testing, Bash Automation

Operating Systems & Tools: Linux (Ubuntu, Arch), Virtual Environments

Education

FAST-NUCES, Peshawar, Pakistan : B.S. in Artificial Intelligence

2024–Present
